# **Useful Docker Commands**

## Build image

```
# the "-t" gives your image a name
docker build -t YourImageName .
```

#### **List Containers**

```
# containers currently runing
docker ps -a
```

## List Images

```
# list all docker images

docker images -a
```

#### Delete containers

```
# Delete every Docker containers
# Must be run first because images are attached to containers
# docker rm $(docker ps -a -q)
```

## Delete images

```
# Delete every Docker image
docker rmi $(docker images -q)
```

# Force delete images

```
# to force use
docker rmi -f $(docker images -q)
```

# Stop container

```
1  stop a container
2  $ docker stop <container id>
```

## Shell in running container

```
# from docker 1.3 onwards
2 $ sudo docker exec -i -t <containerIdOrName> bash
```
